NOTES

1. Working distance: distance between the front end of the lens mechanics and the object. Set this distance within +/-3% of the nominal value for maximum resolution
2. Maximum measurement error without software calibration; standard image correction libraries yield close to zero measurement error.
3. Maximum measurement error without software calibration; standard image correction libraries yield close to zero measurement error.
4. At the borders of the field depth the image can be still used for measurement but, to get a very sharp image, only half of the nominal field depth should be considered. Pixel size used for calculation is 5.5 µm.
5. Indicates the availability of an integrated camera phase adjustment feature. If missing, it can be supplied upon request (except for TCBENCH009).
